

# Rod Mount Shade Install Guide

## FIRST

Notice the 4-way hub located right under the bulb socket. It is a steel ring held in place by a set screw. The four threaded rods pass through the holes in the shade and screw into the corresponding holes in the hub.

## SECOND

- 1) Lower the shade over the bulb socket while positioning it so the holes align with those in the 4-way hub.
- 2) Pass the threaded rods through the holes in the shade and screw them into the holes in the 4-way hub until they bottom out. When installed, the end of the threaded rod will be visible on the outside of the shade.

Support the shade and maintain its position until all four rods are in place.
